Table of Contents

• Preface	iii
• Committee	v
• Sponsors	vii
• Keynotes	
• From dataflow analysis basics to the programming of ASICs	1
<i>Marco Bekooij</i>	
• Cross-Layer Reliability Modeling and Optimization: Compiler and Run-Time System Interactions	2
<i>Muhammad Shafique</i>	
• Full Papers	
• Compiler-Directed Data Locality Optimization in MATLAB	6
<i>Christakis Lezos, Ioannis Latifis, Grigoris Dimitroulakos and Konstantinos Masselos</i>	
• Scalable DFA Compilation for High-Performance Regular-Expression Matching	10
<i>Jan van Lunteren</i>	
• A Rule-based Methodology for Hardware Configuration Validation in Embedded Systems	180
<i>Lin Li, Philipp Wagner, Ramesh Ramaswamy, Albrecht Mayer, Thomas Wild and Andreas Herkersdorf</i>	
• CSDFa: A Model for Exploiting the Trade-Off between Data and Pipeline Parallelism	30
<i>Peter Koek, Joost Hausmans, Stefan Geuns, Marco Bekooij and Henk Corporaal</i>	
• In-Place Update in a Dataflow Synchronous Language: A Retiming-Enabled Language Experiment	40
<i>Ulysse Beaugnon, Albert Cohen and Marc Pouzet</i>	
• Introducing MoC Drivers for the Integration of Sensor-Actuator Behaviors in Model-Based Design Flows of Embedded Systems	50
<i>Omair Rafique and Klaus Schneider</i>	
• HAPI: An Event-Driven Simulator for Real-Time Multiprocessor Systems	60
<i>Philip Kurtin, Joost Hausmans and Marco Bekooij</i>	
• Vectorization in PyPy's Tracing Just-In-Time Compiler	67
<i>Richard Plangger and Andreas Krall</i>	
• Cache-Aware Instruction SPM Allocation for Hard Real-Time Systems	77
<i>Arno Luppold, Christina Kittsteiner and Heiko Falk</i>	
• Practical Challenges of ILP-based SPM Allocation Optimizations	86
<i>Dominic Oehlert, Arno Luppold and Heiko Falk</i>	
• Determining Performance Boundaries on High-Level System Specifications	90
<i>Wouter van Teijlingen, Carlo Galuzzi, Bart Kienhuis and Rene van Leuken</i>	
• Compositional Temporal Analysis Method for Fixed Priority Pre-emptive Scheduled Modal Stream Processing Applications	98
<i>Guus Kuiper, Joost Hausmans, Stefan Geuns and Marco Bekooij</i>	
• Automatic Generation of Thread Communication Graphs from SystemC Source Code	108
<i>Tim Schmidt, Guantao Liu and Rainer Doemer</i>	
• RDBG: a Reactive Programs Extensible Debugger	116
<i>Erwan Jahier</i>	
• Energy-Optimized Static Scheduling for Many-Cores with Task Parallelization, DVFS and Core Consolidation ..	126
<i>Nicolas Melot, Christoph Kessler and Jörg Keller</i>	
• Machine Learning Approach to Generate Pareto Front for List-scheduling Algorithms	127
<i>Nam Khanh Pham, Akash Kumar and Khin Mi Mi Aung</i>	
• Sporadic Task Handling in Time-Triggered Systems	135
<i>Matthias Freier and Jian-Jia Chen</i>	
• A Task-Level Monitoring Framework for Multi-Processor Platforms	145
<i>Philipp Ittershausen, Kim Gruettner and Wolfgang Nebel</i>	
• Design-Time/Run-Time Mapping of Security-Critical Applications in Heterogeneous MPSoCs	153
<i>Andreas Weichslgartner, Stefan Wildermann, Johannes Götzfried, Felix Freiling, Michael Glaß and Jürgen Teich</i>	

• Exploiting Configuration Dependencies for Rapid Area-efficient Customization of Soft-core Processors	163
<i>Deshya Wijesundera, Alok Prakash, Siew Kei Lam and Thambipillai Srikanthan</i>	
• Studying the Impact of Bit Switching on CPU Energy	173
<i>Ghassan Shobaki, Najm Eldeen Abu Rmaileh and Jafar Jamal</i>	
• A Design Framework for Mapping Vectorized Synchronous Dataflow Graphs onto CPU-GPU Platforms	20
<i>Shuoxin Lin, Yanzhou Liu, William Plishker and Shuvra Bhattacharyya</i>	
• Research Presentations	
• A Lightweight Design Space Exploration And Optimization Language	190
<i>Alexander Diewald, Sebasitan Voss and Simon Barner</i>	
• An Extensible Platform Description Language Supporting Retargetable Toolchains and Adaptive Execution [Extended Abstract]	194
<i>Christoph Kessler, Lu Li, Aras Atalar and Alin Dobre</i>	
• Exploring single-source shortest path parallelization on shared memory accelerators	197
<i>Daniele Palossi and Andrea Marongiu</i>	

Preface

Dear Colleague,

Welcome to Sankt Goar and the SCOPES workshop. This year we are presenting a workshop program that features many interesting talks on all aspects related to the design of modern embedded systems. I hope that you will find our program interesting, stimulating and exciting.

The influence of embedded systems is constantly growing. Increasingly powerful and versatile devices are developed and put on the market at a fast pace. Their functionality and number of features is increasing, and so are the constraints on the systems concerning size, performance, energy dissipation and timing predictability. To meet all these constraints, multi-processor systems on a chip (MPSoCs) are becoming popular in embedded systems. In order to meet the performance and energy constraints of embedded applications, heterogeneous architectures incorporating functional units optimized for specific functions are commonly employed. This technological trend has dramatic consequences on the parallelization, mapping, compiler and design technology used to develop these systems. The SCOPES workshop focuses on the software generation process for these modern embedded systems. Topics of interest include all aspects of the compilation and mapping process of embedded single and multi-processor systems.

SCOPES received a total of 36 research papers coming from many different countries in Europe, North-America, Asia, Middle-East, Africa, and Australia. Each paper has been reviewed by at least three independent reviewers to ensure the quality of the workshop. Each reviewer provided a score together with detailed comments and suggestions on how to improve the overall quality of each paper. After an on-line meeting, the program committee has decided to accept 22 papers out of these 38 submissions. This gives an acceptance rate of 63% which is similar to earlier editions of the SCOPES workshop. It also reflects our commitment to only select high quality papers for presentation at our workshop.

In addition to the research papers, the workshop features also 4 research presentations. The idea of research presentations was previously used at the Map2MPSoC workshop. After the merger of SCOPES and Map2MPSoC this idea has been continued in the SCOPES workshop program. Research presentations show research results relevant to the topics addressed by the workshop. These presentations may be based on on-going work or research results that have previously been presented in other forums. Research presentations may include a short publication in the SCOPES proceedings. Therefore all submitted presentations have undergone a light review.

In conclusion, I would like to thank the members of the program committee and the external reviewers for their contribution to the quality of this workshop. I would also like to thank all authors for choosing SCOPES as the workshop where to report your research and your contributions to the scientific community. Finally, I would like to thank our sponsors for their support to SCOPES 2016. I wish all of you a fruitful conference and a pleasant stay in Sankt Goar.
