## Table of Contents

• Preface .....	iii
• Committee .....	v
• Sponsors .....	vii
• Efficient Application of Tensor Core Units for Convolving Images .....	1
<i>Stefan Groth, Jürgen Teich and Frank Hannig</i>	
• FADE: FaaS-inspired application decomposition and Energy-aware function placement on the Edge .....	7
<i>Achilleas Tzenetopoulos, Charalampos Marantos, Giannos Gavrielides, Sotirios Xydis and Dimitrios Soudris</i>	
• LoopOpt: Declarative Transformations Made Easy .....	11
<i>Lorenzo Chelini, Martin Kong, Tobias Grosser and Henk Corporaal</i>	
• How to exploit sparsity in RNNs on event-driven architectures .....	17
<i>Jarno Brils, Luc Waeijen and Arash Pourtaherian</i>	
• Predicting Objectives on a Reduced Search Space of Multiobjective Function Inlining .....	23
<i>Kateryna Muts and Heiko Falk</i>	
• So Far So Good - Self-Adaptive Dynamic Checkpointing for Intermittent Computation based on Self-Modifying Code .....	29
<i>Bahram Yarahmadi and Erven Rohou</i>	
• lospre in linear time .....	35
<i>Philipp Krause</i>	

## Preface

Dear Colleague,

Welcome to the SCOPES workshop. Due to the COVID-19 pandemic, we are meeting in a virtual venue instead of in Eindhoven. This year we are presenting a workshop program that features many interesting talks on all aspects related to the design of modern embedded systems. I hope that you will find our program interesting, stimulating and exciting.

The influence of embedded systems is constantly growing. Increasingly powerful and versatile devices are developed and put on the market at a fast pace. Their functionality and number of features is increasing, and so are the constraints on the systems concerning size, performance, energy dissipation and timing predictability. To meet all these constraints, multi-processor systems on a chip (MPSoCs) are becoming popular in embedded systems. In order to meet the performance and energy constraints of embedded applications, heterogeneous architectures incorporating functional units optimized for specific functions are commonly employed. This technological trend has dramatic consequences on the parallelization, mapping, compiler and design technology used to develop these systems. The SCOPES workshop focuses on the software generation process for these modern embedded systems. Topics of interest include all aspects of the compilation and mapping process of embedded single and multi-processor systems.

SCOPES received a total of 15 research papers coming from many different countries in Europe and North-America. Each paper has been reviewed by at least three independent reviewers to ensure the quality of the workshop. Each reviewer provided a score together with detailed comments and suggestions on how to improve the overall quality of each paper. After an on-line meeting, the program committee has decided to accept 7 papers out of these 15 submissions. This gives an acceptance rate of 47% which is slightly higher compared to earlier editions of the SCOPES workshop. It also reflects our commitment to only select high quality papers for presentation at our workshop.

In addition to the research papers, the workshop features also 1 research presentations. The idea of research presentations was previously used at the Map2MPSoC workshop. After the merger of SCOPES and Map2MPSoC this idea has been continued in the SCOPES workshop program. Research presentations show research results relevant to the topics addressed by the workshop. These presentations may be based on on-going work or research results that have previously been presented in other forums. Research presentations may include a short publication in the SCOPES proceedings. Therefore all submitted presentations have undergone a light review.

In conclusion, I would like to thank the members of the program committee and the external reviewers for their contribution to the quality of this workshop. I would also like to thank all authors for choosing SCOPES as the workshop where to report your research and your contributions to the scientific community. Finally, I would like to thank our sponsors for their support to SCOPES 2021. I wish all of you a fruitful conference.

Sander Stuijk
